

“ADManager Plus has given us the experience of simplified and trouble-free reporting on AD objects.”

- Ronald Stoffels, Medewerker Server Cluster, Back Office ICT Services, Herleen

Challenge

The IT department of Herleen Local government has over 2700 users. The department was finding it cumbersome to track the accounts and objects that were no longer in use.

They wanted a solution that will:

- Generate reports on all AD objects
- Identify disabled users in AD
- Isolate unused groups, GPOs, etc.

Solution

The IT staff evaluated a variety of Active Directory tools and found ADManager Plus to be a software tailored to suit their needs.

ADManager Plus featured:

- A comprehensive reporting bundle with over 100+ useful reports.
- Exclusive reports to identify disabled users, unused groups, GPOs, etc.
- Ability to Clean Up AD from reports generated on inactive objects.
- Ease of report generation and intuitive User Interface.

ADManager Plus made it easy for us to identify disabled users, groups and group policy objects in AD.

Result

ADManager Plus helped SXC to easily discard the unwanted AD objects. With fewer objects to move, IT administrators at SXC could better manage their migration project by delegating tasks to help desk associates. ManageEngine ADManager Plus thus helped SXC Health Solutions Inc., achieve a smooth business transition.

“ADManager Plus was by far the best software among the others that we evaluated.”- Ronald Stoffels.
